Wraptor® SHW-250

High-speed wraparound sleeve multipacking

The Wraptor® SHW-250 is a reliable, paperboard wrap multipacking solution designed to handle the requirements of 24/7 production at speeds up to 250 wraps per minute. The machine has been engineered to package a wide range of applications, including a variety of products in many different wrap styles. All applications utilize the most economical paperboard wrap package available. The wrap can be secured with either hot melt glue or, for ultimate recyclability and sustainability, a mechanical paperboard lock can be utilized, meaning your packages will be 100% glue free.

This machine achieves all that while providing years of worry-free operation with minimal maintenance and repair costs. The best part is that the machine is not tied to a paperboard wrap contract, which allows our customers to shop around for the lowest wrap prices, delivering lower costs and higher margins on products.

Applications

Glass bottles
Plastic bottles
Aluminum cans

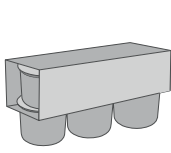

Cups
Trays
Bowls

Beverages
Foods
Pet foods
