Inspection Care

Bring performance back to where it belongs

Understanding the actual equipment condition is the first step toward **reliable and consistent performance**. **Inspection Care** provides a structured assessment of the machine's maintenance status, helping identify risks, performance losses, and required corrective actions before they lead to more significant disruptions. It supports the goal of **Performance Sustain** by combining detailed diagnostics with targeted restoration activities to bring the equipment back as close as possible to its original condition and create the foundation - for stable performance over time..

What's included?

This bundle combines a comprehensive **preventive assessment** of the machine's maintenance condition with the **maintenance activities** and **spare parts** required to restore its nominal operating status. The resulting **inspection report** provides a clear overview of improvement priorities and maintenance activities to be implemented.

This Bundle covers the following services:

Maintenance services

- **Preventive Inspection:** A complete assessment of the electrical and mechanical condition of the asset, including a detailed inspection report highlighting risks, wear conditions, and improvement opportunities.
- **Maintenance:** Targeted restoration activities aimed at bringing the machine back to its intended maintenance condition and supporting reliable operation.

Spare parts

- All parts required to restore the equipment to the desired operating condition based on inspection findings.

Recommended options for this bundle

This Bundle can be further enhanced by adding:

- **Recommended Spare Parts:** Suggested spare parts identified during the inspection to support ongoing reliability and reduce future risks.
- **Critical Spare Parts:** Key components recommended to minimize downtime in the event of future failures.
- **SW Program Backup:** Secure backup of machine software and control programs to support recovery and continuity.

When Inspection Care makes the difference

Inspection Care supports operations when the priority is to:

- Assess the true condition of underperforming equipment
- Restore machinery to a **healthy operating state**
- Establish the basis for a more structured maintenance approach

Ideal for:

- Operating equipment that has not been assessed for an extended period
- Operations aiming to **improve reliability** and reduce recurring issues
- Teams looking to identify maintenance priorities and optimization opportunities
- Organizations focused on restoring performance and **protecting long-term asset value**

How it works:
Contact your Customer Service Representative to discuss your requirements and customize the Inspection Care bundle based on your equipment, operational needs, and medium-term priorities.

Inspection Care combines structured diagnostics, maintenance expertise, and targeted restoration activities to help you understand equipment condition, restore nominal performance, and reduce the risk of future failures.
